

Appeal Decision

Site visit made on 15 October 2024

by Terrence Kemmann-Lane JP DipTP FRTPI MCMI

an Inspector appointed by the Secretary of State

Decision date: 31 October 2024

Appeal Ref: T2215/Z/24/3346312

Roundabout at Junction of Watling St, St James Lane and Darenth Wood Road, Dartford, DA2 8DA

- The appeal is made under Regulation 17 of the Town and Country Planning (Control of Advertisements) (England) Regulations 2007 (as amended) against a refusal to grant express consent.
 - The appeal is made by Marketing Force Limited against the decision of Dartford Borough Council.
 - The application Ref is DA/24/00245/ADV.
 - The advertisement proposed is display of 4 free standing, non-illuminated fascia advertising boards.
-

Decision

1. The appeal is dismissed.

Preliminary matters

2. The appeal is accompanied by a revised drawing of the proposed boards, submitted at appendix F to the appellant's appeal statement. The first change made to the drawing that was submitted at application stage is the addition of a bullet point in the notes at the bottom of the drawing indicating that the height of text used on the signage would measure between 10 and 20 cm. The second change is that the overall width of the advertisement would be reduced to 1016mm from the 1219mm referred to in the officer's report. These are not significant changes necessitating fresh consultation.
3. The planning officer's report referred to an earlier set of appeals in 2008 for similar advertising signs on some of the same sites¹. Some reliance is placed by the council on the fact that all of those earlier appeals were dismissed on both amenity and public safety grounds, asserting that the conclusions of that Inspector are applicable to the current set of appeal proposals.
4. However, there are a number of material changes since 2008 that have been put before me and that I need to take into account and may lead to decisions that differ from those made in the 2008 appeals. These include changes in the design of the proposed boards, the introduction of the National Planning Policy Framework (NPPF) in 2012, with subsequent revisions; the National Planning Practice Guidance (NPPG) on Advertisements in 2014; improved road safety, with a reduction in road traffic accidents; more recently adopted development plan documents, including the Local Plan of 2024, when the extant local plan at

¹ Appeal references APP/T2215/H/08/1203314, 1203315, 1203316, 1203317, 1203318, 1203319.

the time was from 1995; more recent publications concerning adverts and road safety, referred to by the appellant such as Transport for London's (TfL) Guidance for Digital Roadside Advertising and Proposed Best Practice (2013) (Appendix B) and the academic study by Oviedo-Trespalacios et al. (2019) (Appendix C).

Main Issues

5. The main issues in this case are: i) the effect of the proposed advertisements on amenity; and ii) their effect on risks to public safety.

Reasons

Planning policies

6. The most relevant development plan policies of the Dartford Plan (2024) are Policies M1: Good Design for Dartford and M16: Active Travel, Access and Parking. In particular section 5 of Policy M1 should be noted. This reads: "5. *Signage and advertisements must be of a scale and design that is sympathetic to the building and locality, particularly in the designated Area of Special Advertisement Control, and must not have a negative impact on visual amenity, public safety or the safe and convenient movement of pedestrians, cyclists and vehicles*". Policy M16 includes the following: "1. *Development must be of a design and layout to promote walking, cycling and public transport use through provision of attractive, well-designed and safe routes which address the needs of users.*" and "3. *Adverse effects from the travel and movement issues associated with any development, including on amenity or the environment, must be minimised*".
7. As a material consideration of importance, the NPPF at paragraph 141, in relation to advertisements, states: "*The quality and character of places can suffer when advertisements are poorly sited and designed. A separate consent process within the planning system controls the display of advertisements, which should be operated in a way which is simple, efficient and effective. Advertisements should be subject to control only in the interests of amenity and public safety, taking account of cumulative impacts*".

The advertisements

8. The advertisement boards are 1m high and 1.22m wide with the base set 300mm above ground level. The adverts are supported by two posts and are non-illuminated. The appellant advises that the advertisements would provide additional income for Kent County Council as the Highway Authority for the area to be used to support the management of Dartford's and Kent's Highways. The details submitted do not provide any detail as to the content of the advertisements, or that they relate to the locality. The drawing titled 'Sign Specification' shows an advertisement area illustrated with "SPONSOR'S ADVERT HERE". Below that on a widened part of the framework is a Kent County Council logo.

The effect of the proposed advertisements on amenity

9. The roundabout is relatively large, located at a junction between four highways in an edge-of-town location. To the north it is in close proximity to Bluewater Shopping Centre and Darent Valley Hospital. It is also close to the St James Lane development site which will provide a large residential development. To

the south is the hospital and agricultural land. Aside from the vehicular highways, provision is made for pedestrians and cyclists in a landscaped setting which provides visual containment and gives the area a rural feel, in spite of the electricity pylons and overhead cabling.

10. The roundabout itself is domed, covered by grass on a brick surround in which chevrons are picked out in dark bricks between light coloured bricks. It is landscaped and contains a mixture of low-level and taller more established planting. It also has metal chevrons and turn left signs mounted on poles, but these are well-spread and low-key and have only a minor effect of the character of the area which has a very rural feel. In this context the proposed advertising boards would be harmful to the amenity of the area.

Risks to public safety

11. The description of the site and its surroundings that I have given demonstrates that, in spite of the provision for, and the level of traffic, the roundabout has a simple geometry set in a pleasant context. It is not a situation that is particularly demanding on the driving skills of those in motor vehicles.
12. At paragraph 4 above I have made reference to publications that post-date the 2008 appeal decisions. The findings of TfL's Guidance for Digital Roadside Advertising and Proposed Best Practice (2013) cannot reasonably be confined to circumstances within its own geographical area, and therefore I find compelling the statement within Appendix B, quoted by the appellant that: *"Based on the literature review and on our own knowledge and experience of the field it is considered that there is no demonstrable proof that advertisements cause traffic collisions"*. This is reinforced by the quotations given by the appellant from the study by Oviedo-Trespalacios et al.
13. My driving experience is in accord with the conclusions of the documents referred to; in most circumstances, the proposed boards would not be so distracting that they would result in an unacceptable impact on public safety. That would be so in this case; I consider that they would not be prejudicial to the intentions of policy M1 of the Dartford Plan and paragraph 141 of the NPPF.

Conclusions

14. Having taken account of all matters raised, for the reasons that I have set out in paragraph 10 above, I conclude that the appeal should be dismissed.
