

Appeal Decision

Site visit made on 15 October 2024

by Terrence Kemmann-Lane JP DipTP FRTPI MCMI

an Inspector appointed by the Secretary of State

Decision date: 31 October 2024

Appeal Ref: APP/T2215/Z/24/3346307

**Roundabout at Junction of London Road, The Brent and St Vincent's Road
Dartford, DA1 1XF**

- The appeal is made under Regulation 17 of the Town and Country Planning (Control of Advertisements) (England) Regulations 2007 (as amended) against a refusal to grant express consent.
 - The appeal is made by Marketing Force Limited against the decision of Dartford Borough Council.
 - The application Ref is DA/24/00244/ADV.
 - The advertisement proposed is display of 4 free standing, non-illuminated fascia advertising boards.
-

Decision

1. The appeal is dismissed.

Preliminary matters

2. The appeal is accompanied by a revised planning drawing of the proposed boards, submitted at appendix F to the appellant's appeal statement. The first change made to the drawing that was submitted at application stage is the addition of a bullet point in the notes at the bottom of the drawing indicating that the height of text used on the signage would measure between 10 and 20 cm. The second change is that the overall width of the advertisement would be reduced to 1016mm from the 1219mm referred to in the officer's report. These are not significant changes necessitating fresh consultation.
3. This appeal is one of a number that I am dealing with, for the same advertising boards to the same specification, made by this appellant. The planning officer's report referred to an earlier set of appeals in 2008 for similar advertising signs on some of the same sites¹. Some reliance is placed by the council on the fact that all of those earlier appeals were dismissed on both amenity and public safety grounds, asserting that the conclusions of that Inspector are applicable to the current set of appeal proposals.
4. However, there are a number of material changes since 2008 that have been put before me and that I need to take into account and may lead to decisions that differ from those made in the 2008 appeals. These include changes in the design of the proposed boards, the introduction of the National Planning Policy Framework (NPPF) in 2012, with subsequent revisions; the National Planning Practice Guidance (NPPG) on Advertisements in 2014; improved road safety, with a reduction in road traffic accidents; more recently adopted development

plan documents, including the Local Plan of 2024, when the extant local plan at the time was from 1995; more recent publications concerning adverts and road safety, referred to by the appellant such as Transport for London's (TfL) Guidance for Digital Roadside Advertising and Proposed Best Practice (2013) (Appendix B) and the academic study by Oviedo-Trespalacios et al. (2019) (Appendix C).

Main Issues

5. The main issues in this case are: i) the effect of the proposed advertisements on amenity; and ii) whether they would pose a risk to public safety

Reasons

Planning policies

6. The most relevant development plan policies of the Dartford Plan (2024) are Policies M1: Good Design for Dartford and M16: Active Travel, Access and Parking. In particular section 5 of Policy M1 should be noted. This reads: "5. *Signage and advertisements must be of a scale and design that is sympathetic to the building and locality, particularly in the designated Area of Special Advertisement Control, and must not have a negative impact on visual amenity, public safety or the safe and convenient movement of pedestrians, cyclists and vehicles*". Policy M16 includes the following: "1. *Development must be of a design and layout to promote walking, cycling and public transport use through provision of attractive, well-designed and safe routes which address the needs of users.*" and "3. *Adverse effects from the travel and movement issues associated with any development, including on amenity or the environment, must be minimised*".
7. As a material consideration of importance, the NPPF at paragraph 141, in relation to advertisements, states: "*The quality and character of places can suffer when advertisements are poorly sited and designed. A separate consent process within the planning system controls the display of advertisements, which should be operated in a way which is simple, efficient and effective. Advertisements should be subject to control only in the interests of amenity and public safety, taking account of cumulative impacts*".

The advertisements

8. The advertisement boards are 1m high and 1.22m wide with the base set 300mm above ground level. The adverts are supported by two posts and are non-illuminated. The appellant advises that the advertisements would provide additional income for Kent County Council as the Highway Authority for the area to be used to support the management of Dartford's and Kent's Highways. The details submitted do not provide any detail as to the content of the advertisements, or that they relate to the locality. The drawing titled 'Sign Specification' shows an advertisement area illustrated with "SPONSOR'S ADVERT HERE". Below that on a widened part of the framework is a Kent County Council logo.

The effect of the proposed advertisements on amenity

9. The roundabout is relatively small and is located at the junction of The Brent (A226) with St Vincent's Road and Watling Street. At this point they are primarily running through a residential area, with the occasional commercial

premises. A church of modern design is a prominent feature in the north-west quadrant between St Vincent's Road and The Brent. The roundabout is of a familiar design: domed with a grassed upper surface on an angled brick surround with chevrons picked out in dark bricks between light coloured bricks denoting turn left. The outer edge of the grass, with some low level shrubs, carries a number of traffic direction signs mounted on posts, whilst at the centre is a substantial pole with what may be a camera at the top.

10. Because the roundabout is small, it currently has a somewhat cluttered appearance as a result of the traffic direction signs and the central pole. The immediate area has a pleasant suburban character, but the hard surfacing that is a feature of much of the frontage development at this junction, together with safety railings, bollards, etc, have a harmful effect of the streetscene. The addition of the proposed vinyl coloured advertisement boards would add to the clutter and hard surfacing. This would be detrimental to the amenity of the area surrounding the roundabout.

Risks to public safety

11. The roundabout is located within a 30mph zone with vehicle speeds for much of the time likely to be well below this. There is no problem with the geometry of the roundabout, and sight lines at the 4 entry points are satisfactory.
12. At paragraph 4 above I have made reference to publications that post-date the 2008 appeal decisions. The findings of TfL's Guidance for Digital Roadside Advertising and Proposed Best Practice (2013) cannot reasonably be confined to circumstances within its own geographical area, and therefore I find compelling the statement within Appendix B, quoted by the appellant that: *"Based on the literature review and on our own knowledge and experience of the field it is considered that there is no demonstrable proof that advertisements cause traffic collisions"*. This is reinforced by the quotations given by the appellant from the study by Oviedo-Trespalacios et al.
13. My driving experience is in accord with the conclusions of the documents referred to; in most circumstances, the proposed boards would not be so distracting that they would result in an unacceptable impact on public safety. That would be so in this case; I consider that they would not be prejudicial to the intentions of policy M1 of the Dartford Plan and paragraph 141 of the NPPF.

Conclusions

14. Having taken account of all matters raised, for the reasons that I have set out in paragraph 11 above, I conclude that the appeal should be dismissed.
